

OMNIPURGE

OMNIPURGE is a cost effective solution for recovering milk in the delivery line at the end of milking.

The system consists of a manually operated control box and purge valve which are easily fitted to new or existing installations.

The system is compressed air operated.

The valve is opened to inject the air which transports the milk to the bulk tank. The system payback period is favourable and the longer the delivery line the more milk recovered.

The valve is clean in place (CIP) for maximum plant hygiene.

KEY FEATURES

- Saves time and money by recovering milk in the delivery line
- Non electric
- Easily fitted and operated
- Suitable for new and existing installations

SPECIFICATIONS

PART NUMBER (MPC1023)	
AIR INLET	10mm
COMPRESSOR SIZE	12 CFM (not supplied)
AIR OUTLETS	10mm (air injection) 6mm (control)
ENCLOSURE	170h x 135w x 90d
MOUNTING	External Screw Mounts

CONTROLS

VALVE	Open or Closed
PURGE	On or Off
