

SORTING

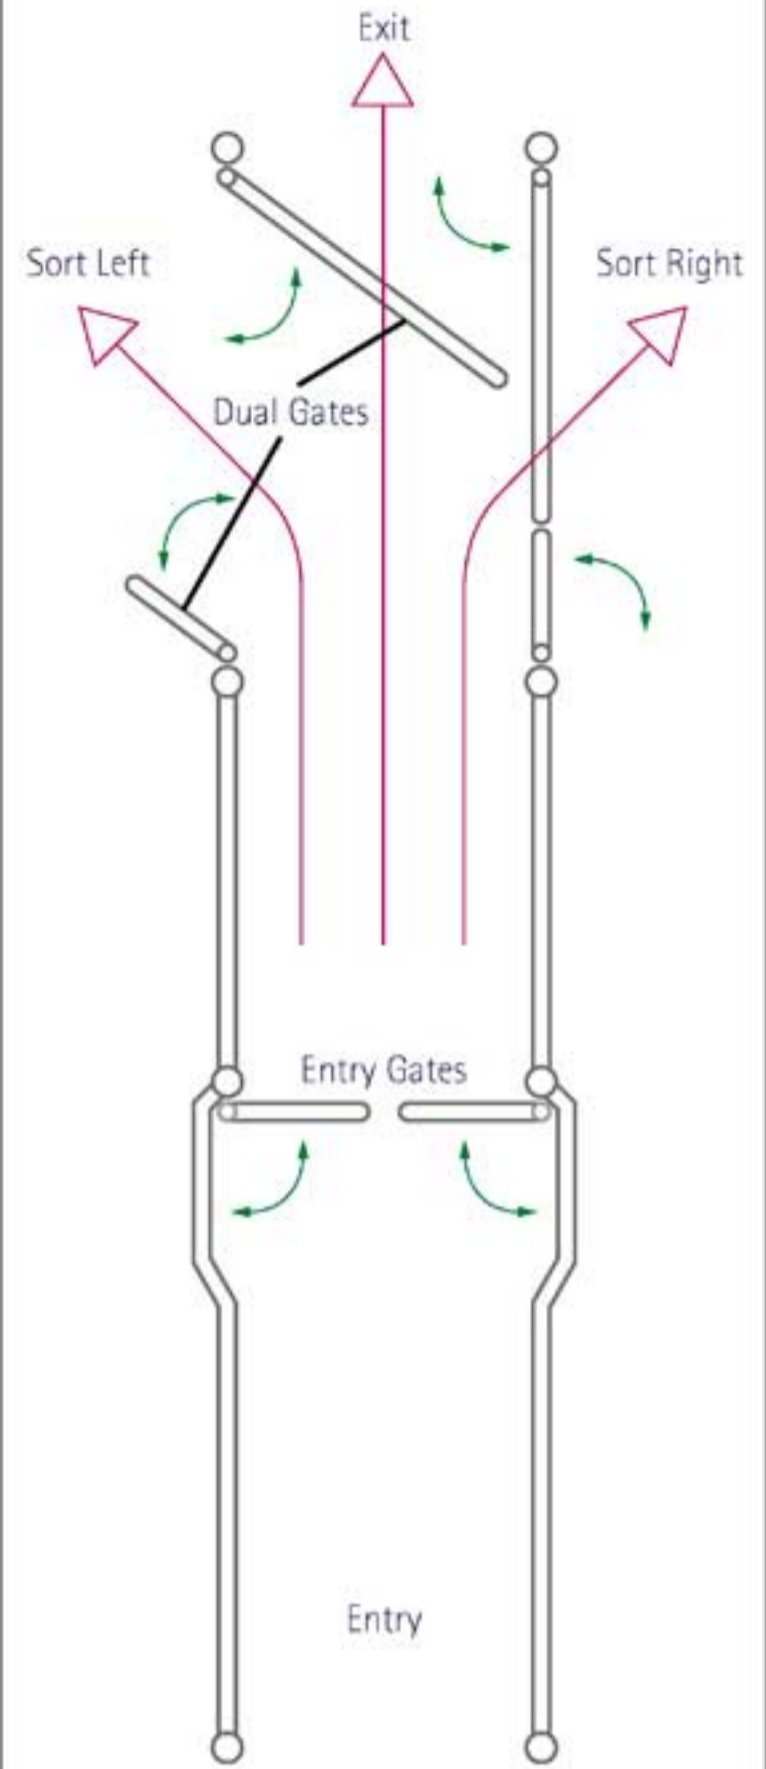

The *Sorting Manager* takes the stress out of the milking process by reliably sorting those cows that have been manually identified for sorting, cows that match predetermined reports for sorting or cows that have been alerted during milking.

Intelligent sorting controls with cow positioning sensors and twin verification antenna carefully select the right cow for sorting. Robust gate hardware makes operation reliable each time. 'Cushioned end' pneumatically controlled rams ensure responsive gate action without excessive noise during operation. The 'wide opening' sorting gate feature creates more room for the cow to exit when sorting. This improves cow flow.

A roof is provided for outdoor installations to keep the sensors, antennas, control and pneumatics away from the harsh environment.

The *Sorting Manager* reduces labour and allows you to manage your herd in many new ways which are not economical with a manual system. If you want to improve your productivity, *Sorting Manager* is at the heart of your solution.

AUTOMATED

- Cows that are selected during milking are automatically sorted for inspection
- Cows on-heat, yield deviation, high conductivity and many more
- Summary report outlines cows that have been sorted and for what reason

GROUPS

- Double click the *Milking* on the *Day* you want to sort cows
- Select the sorting report that you wish to operate at the milking
- Set as a permanent or one off report
- Print a summary report of cows to be sorted

OPTION 1 STANDALONE SORTING

- 3 way sorting
- Robust kitset construction
- Fully Hot dipped galvanized
- Manual pneumatic controls
- Quality rams with "Soft Stop" action
- Upgradable to options 2, 3 or 4 at any stage

OPTION 2 STANDALONE SORTING WITH ELECTRONIC ID

- 3 way sorting gate and construction features as detailed in option 1
- Automatic sorting of cows using *Radio Frequency* or *Infrared* identification
- Manual selection of cows to be sorted through remote *Data Terminals*
- Maximum of 600 cows
- Upgradable to options 3 or 4 at any stage

OPTION 3 STANDALONE WITH ELECTRONIC ID AND PC SOFTWARE

- 3 way sorting gate and construction features as detailed in option 1
- Automatic sorting of cows using *Radio Frequency* or *Infrared* identification
- Manual selection of cows to be sorted through remote *Data Terminal* or using *PC Software*
- Maximum of 5000 cows
- Upgradable to options 4 at any stage

OPTION 4 iDATAFLOW INTEGRATED SOLUTION

- 3 way sorting gate and construction features as detailed in option 1
- Up to 5 sorting gates, total of 11 way sorting
- Option of pre and post milking sorting
- Automatic sorting of cows using *Radio Frequency* or *Infrared* identification
- Advanced sorting option using *Data terminals* and *iDATAFLOW*
- Maximum of 5000 cows
