

iSPRAY

The iSPRAY is designed to be an easy to fit manual teat spray system. It can be fitted into any brand or type of dairy.

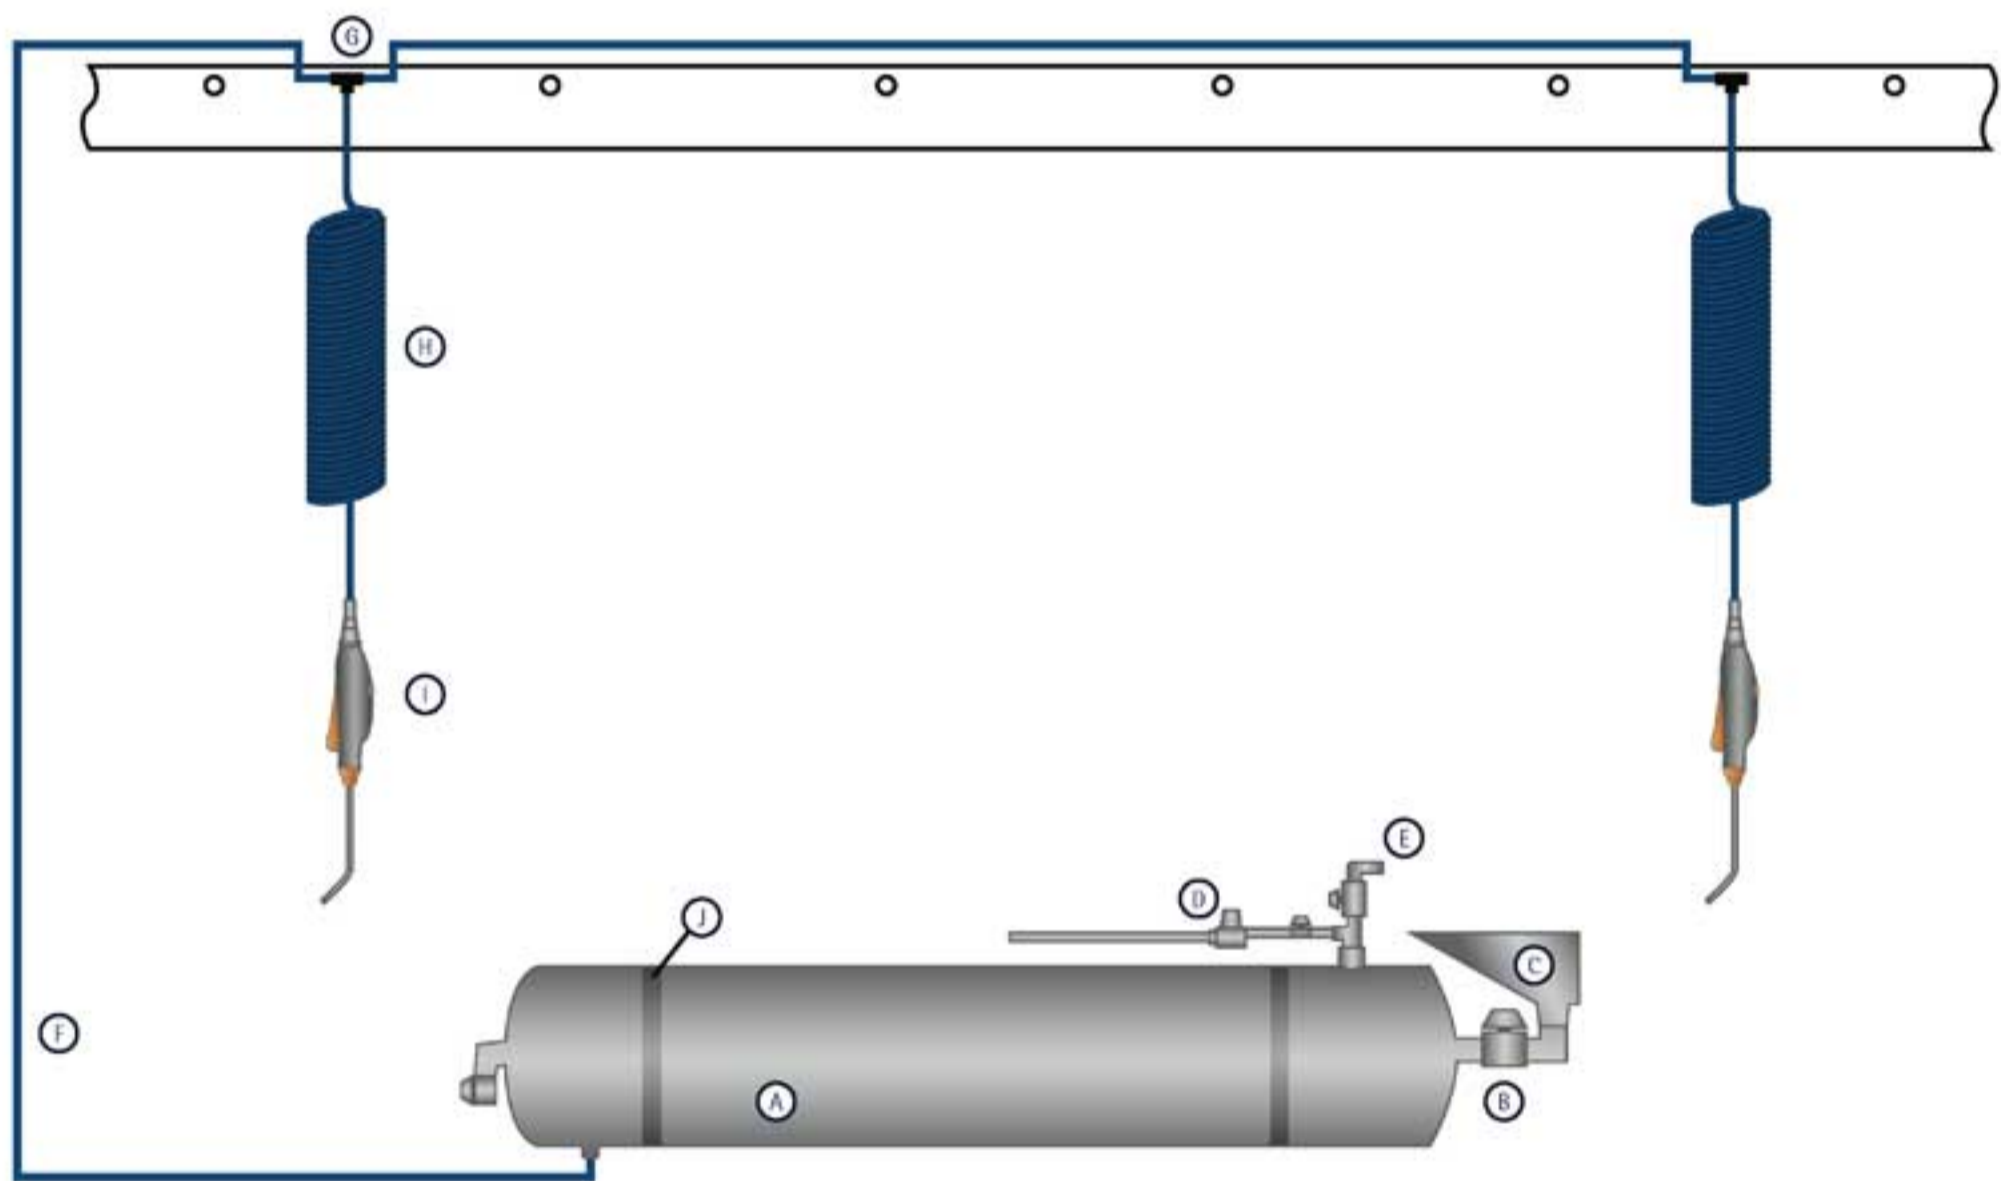

It consists of a PVC moulded pressure vessel in which the teat spray solution is stored and then pressurised by an air compressor. The pressurised teat spray solution is delivered to the spray gun(s) and then sprayed onto the cows teats.

The PVC vessel comes complete with fittings, mounting brackets, funnel and over pressure protection.

The adjustable spray guns are generally connected to a dropper coil which holds the Spray gun out of the way until it is needed. These will extend to 2.5 meters and retract to 500mm. These are generally mounted every 5th milking point in a herringbone dairy.

KEY FEATURES

- Easy to fit
- PVC vessel comes with all fittings
- Extra spray guns can be added as needed
- Dropper coil holds spray gun out of the way

(A) Teat Spray Vessel

(B) Isolating Valve
