

MILK COOLERS

STANDARD COOLER

The Standard Dairy Cooler is designed to suit small to medium size installations. The cooler features a single bank system with a herringbone pressed plate, which is designed to 'roll' the liquids, providing maximum cooling efficiency. The milk and water swirl through their separate circuits in different directions with a double sealing system that eliminates any possibility of liquids mixing. The end plates are made from cast aluminium while the cooling plates are manufactured from 304-grade annealed stainless steel. The plates are sealed with milk grade rubber gaskets. The inlet/outlet connections are 32mm stainless steel tubes and a wall-mounted bracket is supplied.

DESCRIPTION	PLATES	LITRE/HR MILK	LITRE/HR WATER	PART NO
Milfos standard milk cooler SB	18	900	2250	MCS0018
